

TeamConnect® 3.1

The Collaborative Accountability Release

Expand your collaborative accountability firepower with TeamConnect 3.1.

TeamConnect 3.1 includes advanced international e-billing features that reduce VAT management overhead, added vendor collaboration for accrual reporting, vendor visibility into billing guidelines, and custom searches for on-the-fly reports.

Leveraging a customer-driven software development strategy, Mitrtech expands TeamConnect's collaborative accountability functionality in the latest Legal and CSM release. TeamConnect 3.1 delivers expanded functionality for international legal operations, vendor and spend management, usability, performance, and security.

VAT Support

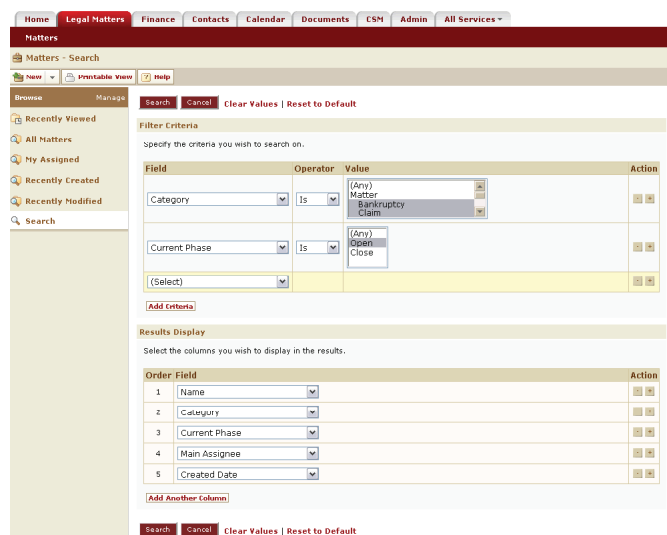

- ▶ Expands your global Collaborati network with audit trails and history records for law firm activities.
- ▶ Allows your foreign firms to submit credit notes for adjusted VAT amounts.
- ▶ Provides support for LEDES 98B-International invoice format submissions.

Accruals Module

- ▶ Provides an auditable process for law firms to submit accrual data with full accountability.
- ▶ Converts inefficient, manual data entry into a streamlined, electronic submission process for fast accrual reporting to corporate finance.

Enhanced Vendor Collaboration

- ▶ Provides enhanced collaboration with law firm visibility into billing guidelines.
- ▶ Allows you to share general guidelines as well as vendor-specific documents, visible only to the intended vendor.

Custom searches allow users to quickly filter through matters and records for on-the-fly reports.

Custom Searches

- ▶ Allows legal professionals to quickly filter through matters and records, and generate on-the-fly reports.
- ▶ Helps build searches by easily adding and removing criteria and exporting the results in Excel or PDF format.

Technology Updates

- ▶ Performance improvements for double the processing speed.
- ▶ Expanded platform support makes TeamConnect the industry's most versatile system.
- ▶ High availability, session failover and recovery, and clustering improvements reduce the risk of hardware disruptions.
- ▶ Security enhancements include revamped authentication frameworks.
- ▶ System maintenance notification features and update tools.
